WA'TER. *ſ.* [*waeter*, Dutch; pæten, Sax.]
1. Sir Iſaac Newton defines water, when pure, to be a very fluid ſalt, volatile, and void of all ſavour or taſte. It ſeems to conſiſt of ſmall, ſmooth, hard, porous, ſpherical particles, of equal diameters, and of equal ſpecifick gravities, as Dr. Cheyne obſerves. Their ſmoothneſs accounts for their ſliding eaſily over one another's ſurfaces; their ſphericity keeps them alſo from touching one another in more points than one; and by both theſe their frictions, in ſliding over one another, is rendered the leaſt poſſible. Their hardneſs accounts for the incompreſſibility of water, when it is free from the intermixture of air. The poroſity of water is ſo very great that there is at leaſt forty times as much ſpace as matter in it; for water is nineteen times ſpecifically lighter than gold, and conſequently rarer in the ſame proportion. *Quincey.*
